ASTANA IT UNIVERSITY · School of Digital Public Administration

WEEKLY INTEGRATED LEARNING RECORD 9

Week 9: Career Capability Portfolio & Workforce Alignment

Student:	Manat Amir (ID: 261434, Group: DPA-2602)
Course:	Business Administration (BA 1204 / BA2026) · Trimester 1 (2026–2027)
Course Instructors:	Gaukhar Yeshenkulova (Lectures) · Symbat Ashimkhanova (Practices)
Company B (Focal):	AB Auto (Astana, 4 IPs, Simplified Tax 3%, Koktal 15B)
Company A (Comparator):	Interkom-Auto (TOO, General Tax Regime 12% VAT, >1.3B KZT Taxpayer)

Syllabus Note: *Per BA2026 syllabus rules for Week 9 (Assignment 4 submission week), only Fields 1 and 2 are recorded here; Fields 3–6 are formally consolidated into Assignment 4.*

FIELD 1 · CONCEPT

In an AI-enabled economy, durable graduate employability rests on the **Four Pillars of Durable Capabilities**:

1. **Human Capabilities:** Interpersonal empathy, high-stakes negotiation, and trust-based relationship management with B2B counterparties where informal reciprocity governs transactions.
2. **Business Capabilities:** Applied financial literacy, command of national tax regimes, disciplined gross-margin defense, and non-delegable fiduciary accountability before regulators and owners.
3. **Digital Capabilities:** Architecting and governing domain software workflows (POS/ERP), verifying algorithmic pipelines, and orchestrating real-time multi-node database synchronization.
4. **Meta-Capabilities:** Epistemic vigilance, critical auditing of algorithmic blind spots, adaptive judgment under supply uncertainty, and autonomous physical quality verification.

Concept Check: As generative and analytical software drives the marginal cost of routine calculation and clerical lookup toward zero, pure computational execution loses market scarcity. Automation therefore shifts specialist value upward toward **meta-capabilities and local contextual interpretation**—auditing *when* standard models misfire against informal credit norms, physical product defects, or statutory constraints.

FIELD 2 · APPLICATION (AB AUTO CAREER CAPABILITY PORTFOLIO MATRIX)

The matrix below maps the four durable capability pillars directly to AB Auto's operational architecture and custom ABPos deployment across Koktal 15B and Abylai Khan 62:

Capability Pillar	Operational Execution in AB Auto & ABPos Architecture	Strategic & Governance Impact
1. Human Capabilities	Managing informal post-repair credit lines with **4–5 core partnering STO garages** (driving **45% of Koktal 15B B2B revenue**) and personally resolving GAZelle parts warranty claims at the counter.	Preserves relational mechanic loyalty that rigid corporate ERP credit gates (Interkom-Auto) cannot price or replicate.
2. Business Capabilities	Enforcing the owner's **>=18% gross margin floor**, allocating revenue within statutory **3% Simplified Tax caps across 4 IPs** (Art. 683 RK Tax Code), and overriding false 0.44x AI insolvency alerts via cash-velocity audits.	Protects 7.00% net profitability, prevents marketplace price-war erosion, and ensures statutory tax compliance.
3. Digital Capabilities	Supervising multi-hub ABPos database synchronization (**Koktal 15B + Abylai Khan 62**), eliminating the **35-minute cross-branch phone bottleneck**, and governing **<60-second Kaspi API zero-stock delisting** triggers.	Cuts order-to-dispatch lead time from 65 to 11.5 minutes and eliminates Kaspi stockout cancellation penalties.
4. Meta-Capabilities	Epistemic auditing of **EAEU supplier invoice OCR** intake, executing the **<85% OCR confidence escalation protocol**, conducting **<2-minute physical factory casting-stamp checks**, and maintaining **12-hour offline warehouse failover** operation.	Prevents counterfeit or mis-cataloged assemblies from immobilizing commercial fleets during internet or border disruptions.
