Business Report

Course: Business Administration
Assignment: Assignment 1: Business Report
Student: Manat Amir
Group: DPA-2602
Company A: Interkom (Interkom-Auto)
Company B: AB Auto
Submission Date: September 2026
Word Count: 1288 words

1. Business Context

AB Auto is a specialized automotive spare parts enterprise operating in Astana, Kazakhstan, primarily serving the commercial light vehicle sector with a distinct focus on GAZelle logistics fleets. The local business environment is heavily influenced by the economic, technological, and global sectors. Economically, as an importer of physical goods, AB Auto is exposed to currency fluctuations between the Kazakhstani Tenge and the Russian Ruble, as well as broader inflationary pressures that constrain the purchasing power of independent commercial drivers and logistics enterprises.

The logistics industry in Astana requires constant vehicle uptime, making immediate component availability the primary driver of market demand. Technological shifts are also reshaping the sector, as B2B trade increasingly demands digital documentation and electronic invoicing (ESF) for tax compliance. While the broader macroeconomic environment favors large, consolidated distributors with massive capital reserves, AB Auto's competitive advantage relies on localized market penetration, immediate physical availability of critical suspension and engine components at its Koktal 15B warehouse, and Abylai Khan Avenue, 62, a highly agile operational structure tailored to the specific needs of Astana's urban logistics networks. By prioritizing direct, high-trust client relationships and navigating local fiscal frameworks, Company B effectively sustains profitability despite the volatile economic cycles affecting cross-border trade.

2. Environment and Stakeholders

AB Auto's operations are heavily dictated by its external supply chain network and the demands of distinct stakeholder groups. The primary external stakeholders include partnering independent auto repair stations (locally known as STOs), independent commercial drivers, corporate B2B clients, and multi-tier wholesale suppliers such as Satis Auto and Planeta Auto.

A critical segment of AB Auto's market relies on four to five verified local STO mechanics with whom the founders have cultivated five to seven years of operational trust. These relationships bypass formal corporate credit checks in favor of physical ledger notebooks,

allowing mechanics to procure parts immediately and settle accounts post-repair. Corporate B2B stakeholders, such as Stolichny Khleb LLP, represent a contrasting demand: they require strict regulatory compliance, electronic delivery receipts (AVR), and formal warranties governed by the State Revenue Committee (KGD) to satisfy institutional accounting standards.

The enterprise faces significant supply chain and ethical tensions driven by international border logistics. Cross-border transit from Russian manufacturers frequently experiences unpredicted delays of one to three days. This creates an inventory vacuum that forces a recurring choice between supplying original Russian OEM parts (e.g., KraftTech) or readily available Chinese aftermarket substitutes (e.g., LYNX). The ethical tension lies in maintaining immediate customer cash flow and vehicle uptime versus ensuring maximum long-term roadworthiness. AB Auto navigates this by maintaining transparent counter-sales communication, ensuring drivers understand the absence of manufacturer warranties on lower-cost imported substitutes before purchase. By prioritizing relational governance over strict institutional policies, AB Auto effectively manages stakeholder expectations while mitigating the operational risks associated with global supply chain friction.

3. Business Model and Ownership

The legal ownership structure of an enterprise dictates its regulatory compliance, tax burden, and operational scalability. Rather than consolidating operations into a single corporate entity like a Limited Liability Partnership (TOO), AB Auto utilizes a decentralized ownership model, structured systematically across four separate Individual Proprietorships (IPs).

This deliberate architectural choice is a strategic response to the Republic of Kazakhstan’s tax code. Operating under a single TOO would force the enterprise’s aggregate revenue to exceed the threshold for mandatory Value Added Tax (VAT) registration, removing their eligibility for the highly favorable simplified tax regime (упрощенка). By distributing commercial activities across four IPs, the founding family legally minimizes its fiscal burden and entirely bypasses the need for a costly, centralized corporate accounting department.

Furthermore, this family-owned structure deeply influences the company's capital financing strategy. To preserve the commercial credit capacity of these IPs for potential future business loans, the enterprise strategically segregates personal and business liabilities. High-value physical assets—such as a Toyota Land Cruiser 300 and other family vehicles—are deliberately financed through personal consumer loans taken out by extended family members rather than the primary IP holders. By shielding the operational IPs from heavy consumer debt loads, AB Auto protects its business credit rating, maintaining agility for B2B financial scaling if necessary.

However, this decentralized model presents inherent limitations in scaling B2B corporate sales, which often require unified corporate taxation and digital invoicing. To bridge this gap, AB Auto modifies its supply channel, occasionally sourcing from larger corporate distributors like Interkom when wholesale scale or formal B2B documentation is strictly required. Ultimately, the multi-IP structure aligns perfectly with an entrepreneurial mindset tailored to a volatile, cash-sensitive market, prioritizing operational survival and inventory liquidity over rigid corporate centralization.

4. Comparison and Transfer Judgment

Company A (Interkom) operates as a major regional wholesale distributor with a centralized corporate model, utilizing digital client dashboards for ordering and rigid, institutionalized protocols for warranty claims and credit limits. Evaluating Interkom's model against AB Auto's relational framework requires careful transfer judgments to protect AB Auto's core competitive advantage.

Reject: Depersonalized, multi-day laboratory warranty verification. Interkom's strict institutional warranty claims process is fundamentally incompatible with AB Auto's core stakeholder base. Imposing corporate bureaucracy would destroy the years of informal trust established with local STOs, whose livelihoods depend on zero vehicle downtime.

Adapt: Structured B2B installment frameworks. Interkom allows clients to order components on credit and repay in structured installments via a client dashboard. AB Auto should adapt the principle of this system by formalizing its existing ledger-based credit into a more predictable, tracked installment schedule for its highest-volume STO partners, balancing relationship trust with long-term cash flow security.

Pilot: A simplified B2B online inventory interface. Interkom utilizes a comprehensive client web portal for all orders. While many of AB Auto's older commercial drivers strongly prefer traditional phone calls, younger mechanics and busy STO partners require speed. AB Auto should pilot a lightweight, mobile-friendly webpage or automated messaging catalog allowing trusted STOs to verify physical stock at both retail points before dispatching a driver, optimizing logistics without forcing clients into a complex corporate ordering portal.

Delay: Full ERP (Enterprise Resource Planning) integration. While Interkom relies on heavy corporate software to manage logistics, AB Auto's current 4-IP structure does not yet possess the administrative bandwidth to support a massive software overhaul. This should be delayed until physical expansion necessitates it.

5. Recommendations

Based on the comparative environmental and operational analysis, AB Auto should implement the following specific interventions within the Kazakhstan market to optimize stakeholder value and operational efficiency:

1. Implement Hybrid Record-Keeping for Trade Credit
What changes: The physical STO ledger notebooks must be digitized into a secure cloud spreadsheet (e.g., Excel/Google Sheets) every 24–48 hours.

Who acts: The Junior Partner / Operations Coordinator.

Evidence of success: 100% reconciliation of monthly STO debts without reliance on physical paper, eliminating data loss risks (e.g., damaged notebooks) while preserving the barrier-free, high-trust customer experience at the physical counter.

2. Standardize Substitute Component Sales Scripts
What changes: Institute a mandatory verbal disclosure framework for counter staff when navigating Russian supply delays. Staff must explicitly state: "The original component (e.g., KraftTech) includes a manufacturer warranty of specific months and a longer lifecycle; the Chinese substitute (e.g., LYNX) is cheaper and reliable for immediate dispatch, but carries no formal shop warranty."

Who acts: Frontline counter sales staff.

Evidence of success: Maintained sales volume during supply delays with zero post-purchase warranty disputes regarding aftermarket components.

3. Launch a 'Stock-Check' Pilot Interface
What changes: Deploy a simple, read-only, mobile-optimized inventory catalog for the core STO partners, allowing them to confirm GAZelle part availability across both store locations prior to travel.

Who acts: The founding management team.

Evidence of success: A measurable reduction in inbound stock-inquiry phone calls and the total elimination of "empty trips" from partner mechanics seeking out-of-stock components.

WEEKLY INTEGRATED LEARNING RECORD 1

Student: Manat Amir
Group: DPA-2602
Course: Business Administration
Attestation Period: 1st Attestation
Focal Organization (Company B): AB Auto (Astana, Kazakhstan — commercial vehicle parts specialist for GAZelle)
Comparative Organization (Company A): Interkom (Interkom-Auto — regional wholesale and retail automotive parts distributor)

FIELD 1: CONCEPT
A business is an operational entity that provides goods and services to fulfill customer demand while generating economic profit and absorbing market risks. Goods represent tangible products (GAZelle engine components, steering racks, suspension parts), whereas services represent intangible support.
The enterprise combines the four classic factors of production:
Land: Two physical brick-and-mortar retail and warehouse outlets operating in Astana.
Labor: A collaborative, flat-structured workforce comprising family founders, counter sales specialists, and logistics handlers.
Capital: Commercial inventory capital, physical storage fixtures, and digital payment infrastructure (Kaspi POS terminals, Kaspi Pay).
Entrepreneurship: The founding vision to serve urban logistics fleets, structured across four individual proprietorships (IP) to optimize fiscal and operational scale under Kazakhstan's tax code. (The candidate 5th factor, Knowledge / Data, is manifested in proprietary parts-matching expertise and emerging marketplace inventory management).
Businesses operate within seven external environment sectors (Economic, Political/Legal, Demographic, Social, Competitive, Technological, and Global). Small enterprises primarily act as adaptive agents to regulatory thresholds, banking transaction fees, and consumer purchasing habits.

FIELD 2: APPLICATION
(Artifact 1: Company Selection & Initial Environment / AI-Opportunity Map)
1.Company Profiles:
Company B (Focal - Family-Owned SME):
AB Auto (Astana, Kazakhstan) An automotive spare parts supplier with two physical branches in Astana, specializing in commercial parts for GAZelle light commercial vehicles. The enterprise operates a dual business model: formal B2B invoicing for institutional delivery fleets (e.g., Stolichny Khleb LLP, New Level, Natige, Kazstroypodryad, Ryaba, Maxrazmah, Vkusmart) and high-touch B2C retail (cash, Kaspi QR, and Kaspi Shop integration). Operational structure is a flat hierarchy led by an active owner-operator; sales staff engage in flexible cross-functional tasks (sales, inventory receiving, client loading assistance) emphasizing cultural rapport and informal relationship-building typical of the Kazakhstan market.

Company A (Comparator — Regional Scale Enterprise):
Interkom (Interkom-Auto) An enterprise-scale automotive parts distributor operating centralized distribution hubs across the CIS, backed by enterprise resource planning (ERP)

software, automated warehousing, formal B2B e-commerce portals, and centralized pricing control.

2.Environmental & AI-Opportunity Matrix for AB Auto:
Sector: Political / Legal & Fiscal
Macro & Local Operational Reality: Strict revenue turnover ceilings separating Individual Entrepreneurship (IP) simplified regimes from corporate VAT/LLP (TOO) status.

Direct Impact on AB Auto: Business splits operations across four individual entrepreneurships to remain within simplified tax thresholds legally.

Potential AI / Digital Opportunity: Automated accounting and revenue-tracking scripts to balance turnover limits across the 4 IP entities in real time.

Sector: Technological & Financial
Macro & Local Operational Reality: Universal adoption of Kaspi ecosystem (Kaspi QR, Kaspi Pay, Kaspi Shop); payment commission differentials between cash and QR.

Direct Impact on AB Auto: Dual-pricing mechanisms (cash discounts vs. QR markup to cover banking fees); manual paper ledger recording of daily sales.

Potential AI / Digital Opportunity: Computer vision or optical character recognition tools to digitize handwritten sales logs into structured inventory databases.

Sector: Social & Cultural
Macro & Local Operational Reality: High value placed on informal rapport, egalitarian interaction ("brotherhood" ethos), and personal trust in Kazakhstan retail.

Direct Impact on AB Auto: Counter staff act as trusted advisors rather than transactional clerks; formal European-style sales protocols are culturally rejected.

Potential AI / Digital Opportunity: Conversational AI (WhatsApp voice-note transcription) that maintains an informal, localized tone for incoming quote requests.

Sector: Competitive
Macro & Local Operational Reality: Direct competition from bazaar stalls, independent retail shops, and formal platforms like Kaspi Shop and Interkom.

Direct Impact on AB Auto: Necessity of fast fulfillment for commercial fleets where vehicle downtime represents substantial daily revenue loss.

Potential AI / Digital Opportunity: Predictive stock replenishment algorithms based on fleet breakdown patterns (seasonal heating/cooling components).

FIELD 3: VERIFICATION AND AI RECORD
Factual & Quantitative Verification:Tax & Legal Framework: Verified RK Tax Code limits for simplified tax declaration regime for individual entrepreneurs (IP); confirmed banking commission deductions on digital acquiring (Kaspi POS) compared to immediate physical cash reconciliation.

Macro Data: Bureau of National Statistics indicators on light commercial logistics growth in Astana; verified operational contracts with commercial delivery fleets (e.g., bakery distribution logistics).

AI Tool & Purpose Disclosure (Level 2 Supported):
System used: Google Gemini (Google AI Pro).

Purpose: Academic translation, conceptual mapping of informal retail operations to OpenStax business environment taxonomy, and structural formatting.

Student Verification & Changes: Replaced generic automotive retailing assumptions with AB Auto's specific reality: four-IP ownership structure, hands-on founder presence, dual cash/Kaspi QR ledger closing, and enterprise B2B delivery contracts (Stolichny Khleb).

FIELD 4: TRANSFER (Initial Transfer Judgment)
Interkom maintains extensive automated cataloging and algorithmic central warehouse replenishment across CIS branches.

Transfer Verdict for AB Auto (Adapt & Reject): • Reject: Interkom's rigid, depersonalized corporate sales scripts, as AB Auto's primary competitive advantage in Astana is rooted in culturally nuanced, high-trust relationship selling. • Adapt: Interkom's digitized parts cross-referencing and inventory indexing. Migrating from handwritten end-of-day ledgers to an automated SKU-tracking solution tailored for Kaspi Shop and over-the-counter sales will cut stock discrepancy without disrupting counter speed.

FIELD 5: EVIDENCE (IEEE References)
[1] L. J. Gitman, C. McDaniel, A. Shah, et al., Introduction to Business, 2nd ed. Houston, TX: OpenStax, Rice University, 2026, ch. 1.1–1.5.

FIELD 6: CAPSTONE LINK

Directly feeds into Capstone Section 1 (Business Context: Operational Model, Strategic Market Problem, and Environment) and establishes the empirical baseline for the comparative analysis in the Week 3 Business Report.

WEEKLY INTEGRATED LEARNING RECORD 2

Student: Manat Amir
Group: DPA-2602
Course: Business Administration
Attestation Period: 1st Attestation
Focal Organization (Company B): AB Auto (Astana, Kazakhstan — commercial vehicle parts specialist for GAZelle)
Comparative Organization (Company A): Interkom (Interkom-Auto — regional wholesale and retail automotive parts distributor)

FIELD 1: CONCEPT
Business ethics and Corporate Social Responsibility (CSR) define how an organization balances profit motives against legal, social, and moral duties to its environment. While ethics govern transactional honesty, product integrity, and equitable consumer treatment, CSR reflects a broader commitment to sustainable stakeholder outcomes.

Stakeholders represent any individuals, groups, or entities impacted by or capable of impacting business decisions. They are classified into internal stakeholders (family owner-operators, retail and counter sales personnel, warehouse laborers) and external stakeholders (commercial drivers, partnering auto repair technicians, fleet enterprises, wholesale distributors, and state tax regulators).

In global trade and supply chain operations, organizations face complex international trade barriers, currency fluctuations, import delays, and quality assurance dilemmas. Ethical tensions frequently emerge between offering low-cost substitute components to maintain immediate customer cash flow versus supplying certified original equipment to ensure passenger safety and fleet roadworthiness.

FIELD 2: APPLICATION (Artifact 2: Stakeholder Map & Regulatory / Ethical Tension Analysis)
1.Comprehensive Stakeholder Matrix for AB Auto:
Internal Stakeholders:
Owner-Operator (Founder): Directs strategic purchasing across distributors, stands behind the physical counter, and manages operational working capital. Frontline Sales & Inventory Staff: Execute product intake, inspect incoming deliveries, and maintain personal counter relationships with commercial buyers.

External Primary Stakeholders (Market & Supply Network):
Partnering Auto Repair Stations (Independent STOs): 4 to 5 key mechanics and garages with 5 to 7 years of established relationship tenure. They utilize high-trust informal trade credit, recorded in individual ledger notebooks, frequently accessing stock behind the retail counter autonomously without prior payment.

Independent Commercial LCV Drivers:
Price-sensitive owner-operators needing immediate mechanical turnaround. Occasionally

rely on temporary trade credit (secured via verbal pledges or driver license collateral) or temporary budget duplicates (e.g., Chinese aftermarket clutches) to stay on the road until payday.

Corporate Fleet Clients (e.g., Stolichny Khleb LLP, Neo Level):
Formal B2B accounts prioritizing strict invoice documentation, electronic delivery receipts (AVR), and legal warranty guarantees to satisfy corporate tax reporting and avoid state penalties.

Upstream Multi-Tier Suppliers:
Direct wholesale platforms including Interkom (wholesale parts supplier), Satis Auto (body components and brake discs), and Planeta Auto (long-term supplier of 5+ years), alongside manufacturer-certified GAZ documentation proving catalog authenticity.

External Secondary Stakeholders (Institutional & Societal):
State Revenue Committee (KGD): Enforces fiscal transparency, electronic invoice compliance (ESF), and turnover thresholds across the four individual entrepreneurships (IP).
Public Safety & Road Users in Astana: Rely on component durability and vehicle safety under severe winter and urban transit conditions.

2.Focal Tension Analysis (Ethical, Regulatory, and Supply Chain):
AB Auto operates within an acute tension between informal, localized trust mechanisms and rigid formal institutional compliance.
In product reliability and warranty claims, formal corporate channels require extensive bureaucracy, written diagnostic reports, and prolonged manufacturer claims. AB Auto resolves this friction through verified community relationships. When defect claims arise from partnering STOs with 5+ years of transaction history, defective parts are replaced immediately on verbal confirmation. Upstream distributors like Interkom and Satis Auto facilitate rolling warranty reconciliation, picking up defective units on subsequent delivery cycles while issuing credit.
Conversely, corporate accounts such as Stolichny Khleb reject informal expedience, requiring strict institutional certification where accounting precision supersedes raw counter delivery speed. Furthermore, supply chain disruptions at borders (1 to 3 days cross-border freight transit variances) force AB Auto to balance certified Russian OEM components against imported Chinese equivalents (such as LYNX clutches, which demonstrate superior operational lifespan compared to baseline KraftTech Russian assemblies). Managing this balance ethically requires transparent disclosure to ensure commercial drivers understand performance lifespans before purchasing lower-priced emergency substitutes.

FIELD 3: VERIFICATION AND AI RECORD
Factual & Quantitative Verification: Verified business operational workflows: 5 to 7 year supplier relationships with Satis Auto and Planeta Auto; active supply procurement and retail competition via Interkom; dedicated notebook accounts for 4 to 5 verified Astana STOs; B2B corporate compliance mandates under Kazakhstani accounting laws (Law of the RK "On Accounting and Financial Reporting"). Cross-border freight delay parameters (1 to 3 calendar days) confirmed against Eurasian Economic Union internal border logistics.

AI Tool & Purpose Disclosure (Level 2 Supported):

System used: Google Gemini (Google AI Pro).

Purpose: Structuring raw interview responses into academic stakeholder categories, articulating ethical and supply chain trade-offs, and ensuring alignment with syllabus rubrics.

Student Verification & Changes: Validated real operational mechanics, including the dual role of Interkom as both upstream distributor and retail competitor, informal credit ledgers for trusted mechanics, and specific component brands (LYNX, KraftTech, Sachs, GAZ-certified documentation).

FIELD 4: TRANSFER (Comparative Stakeholder Governance)
Interkom enforces centralized, depersonalized corporate governance: warranty claims require formal multi-day laboratory diagnostics, credit is strictly gatekept by automated banking scoring, and customer interactions are transactional.

Transfer Verdict for AB Auto (Adapt & Reject):
Reject: Centralized depersonalized warranty verification. Imposing rigid corporate claim protocols would alienate local STO mechanics and independent drivers whose livelihood depends on zero vehicle downtime.

Adapt: Structured supplier SLA (Service Level Agreement) tracking. AB Auto should adopt Interkom's disciplined B2B supplier auditing to track defect ratios across vendors (Interkom vs. Satis vs. alternative distributors), enabling data-driven supplier selection without sacrificing informal customer loyalty.

FIELD 5: EVIDENCE (IEEE References)
[1] L. J. Gitman, C. McDaniel, A. Shah, et al., Introduction to Business, 2nd ed. Houston, TX: OpenStax, Rice University, 2026, ch. 2.1–2.5, 3.1–3.3.

APPENDIX

Student: Manat Amir
Group: DPA-2602
Course: Business Administration (Assignment 1)

1. Artifact Week 1: Environment and AI-opportunity map

Environmental & AI-Opportunity Matrix for AB Auto:
Sector: Political / Legal & Fiscal
Macro & Local Operational Reality: Strict revenue turnover ceilings separating Individual Entrepreneurship (IP) simplified regimes from corporate VAT/LLP (TOO) status.

Direct Impact on AB Auto: Business splits operations across four individual entrepreneurships to remain within simplified tax thresholds legally.

Potential AI / Digital Opportunity: Automated accounting and revenue-tracking scripts to balance turnover limits across the 4 IP entities in real time.

Sector: Technological & Financial
Macro & Local Operational Reality: Universal adoption of Kaspi ecosystem (Kaspi QR, Kaspi Pay, Kaspi Shop); payment commission differentials between cash and QR.

Direct Impact on AB Auto: Dual-pricing mechanisms (cash discounts vs. QR markup to cover banking fees); manual paper ledger recording of daily sales.

Potential AI / Digital Opportunity: Computer vision or optical character recognition tools to digitize handwritten sales logs into structured inventory databases.

Sector: Social & Cultural
Macro & Local Operational Reality: High value placed on informal rapport, egalitarian interaction ("brotherhood" ethos), and personal trust in Kazakhstan retail.

Direct Impact on AB Auto: Counter staff act as trusted advisors rather than transactional clerks; formal European-style sales protocols are culturally rejected.

Potential AI / Digital Opportunity: Conversational AI (WhatsApp voice-note transcription) that maintains an informal, localized tone for incoming quote requests.

Sector: Competitive
Macro & Local Operational Reality: Direct competition from bazaar stalls, independent retail shops, and formal platforms like Kaspi Shop and Interkom.

Direct Impact on AB Auto: Necessity of fast fulfillment for commercial fleets where vehicle downtime represents substantial daily revenue loss.

Potential AI / Digital Opportunity: Predictive stock replenishment algorithms based on fleet breakdown patterns (seasonal heating/cooling components)

2. Artifact Week 2: Stakeholder and ethics map
Comprehensive Stakeholder Matrix for AB Auto:

Internal Stakeholders: Owner-Operator (Founder) who directs strategic purchasing; Frontline Sales & Inventory Staff who execute product intake and maintain personal counter relationships.

External Primary Stakeholders: Partnering Auto Repair Stations (STOs) utilizing high-trust informal trade credit recorded in ledger notebooks; Independent Commercial LCV Drivers; Corporate Fleet Clients (e.g., Stolichny Khleb LLP) requiring strict B2B invoice documentation; Upstream Multi-Tier Suppliers (Interkom, Satis Auto, Planeta Auto).

External Secondary Stakeholders: State Revenue Committee (KGD) enforcing fiscal transparency; Public Safety & Road Users relying on component durability.

Focal Tension Analysis: AB Auto operates within an acute tension between informal, localized trust mechanisms and rigid formal institutional compliance. Cross-border freight transit variances force AB Auto to balance certified Russian OEM components (KraftTech) against imported Chinese equivalents (LYNX) to maintain immediate customer cash flow versus ensuring maximum long-term roadworthiness.

3. AI-Use Declaration (Level 2: Supported)
As required by the course Academic Integrity policy for AI-supported tasks.

AI System Used: Google Gemini (Google AI Pro).
What it was used for: Brainstorming, structural feedback, language support, and mapping raw operational data to the OpenStax academic taxonomy.

What was verified independently: All factual claims, quantitative data, and operational mechanics regarding AB Auto, the 4-IP taxation structure, STO ledger trade credit, supply chain delays (1-3 days), and specific component brands (LYNX, KraftTech). Verified against personal operational experience and local market realities.

What was changed as a result: Rejected generic AI recommendations in favor of localized, Kazakhstan-specific strategic actions (e.g., hybrid STO record-keeping instead of heavy corporate ERP systems). Authored the final transfer judgments.

AI-USE DECLARATION

Assignment 1: Business Report

Comparative analysis of Company A and Company B

Student details

Student name	**Manat Amir**	**Student ID**	**261434**
Group	**DPA-2602**	**Submission date**	**20.09.2026**
Company A	**Interkom (Interkom-Auto)**	**Company B**	**AB Auto**

AI-use level and student responsibility

- **Preparation of this assignment operates at AI-use Level 2 (supported, disclosed).**
- **Permitted with disclosure: brainstorming, structural feedback, language support, counterargument generation where relevant, and preliminary analysis.**
- **You must independently verify every claim, number and source and author the final analysis yourself.**
- **The individual defence operates at Level 1: no AI assistance of any kind.**
- **Do not upload the OpenStax textbook or the course core text to an AI system.**

A. Overall AI-use status

☐ I used one or more AI systems while preparing this assignment. I have documented each use below.

☐ I did not use any AI system for this assignment. I have completed the integrity confirmations and final declaration only.

If you select "no AI used," do not leave the declaration blank: tick the second box and sign the final declaration.

B. AI systems register

List every AI system used. Add rows if needed.

AI system / model	Provider / version (if known)	Date(s) used	Purpose in this assignment

Google Gemini	Google AI (Gemini Pro)	September 18–20, 2026	Language support, academic tone refinement, formatting synthesis, and mapping field observations to OpenStax Chapters 1–4 frameworks.

C. Detailed AI activity and verification log

Record each materially different use. The declaration should show not only what the system did, but how you checked it and what you changed, rejected or corrected.

Part of assignment / activity	AI system	What I used AI to do	How I verified the output independently	What I changed, rejected or corrected
Section 1: Business Context	Google Gemini	Draft academic prose connecting micro-retail GAZelle parts supply to urban logistics in Astana.	Cross-checked local store addresses (Koktal 15B and Abylai Khan 62) and actual client contracts with commercial bakeries (Stolichny Khleb LLP).	Rejected generic online retail models; specified the light commercial vehicle (LCV) uptime dependency in Astana urban freight.
Section 2 & WR 2: Stakeholders & Ethics	Google Gemini	Map informal shop mechanics and cross-border transit tensions into formal stakeholder categories.	Verified real delivery delays (1–3 days) from Russian manufacturers and cross-referenced with partner STO credit practices.	Corrected the stakeholder matrix to include physical ledger notebooks for 4–5 core STOs instead of formal corporate credit scoring.
Section 3: Business Model & Ownership	Google Gemini	Structure comparative ownership models based on OpenStax Ch. 4 (Sole	Checked Kazakhstan Tax Code limits for the simplified tax declaration regime (упрощенка) and	Overruled AI assumption of a single corporate LLP (TOO); articulated the real-world

		Proprietorship vs. Corporation/LLC).	VAT mandatory registration thresholds.	operational architecture of four decentralized Individual Proprietorships (IPs).
Section 4 & 5: Transfer & Recommendations	Google Gemini	Brainstorm potential technological adaptations from Interkom's corporate wholesale portal.	Assessed administrative bandwidth of AB Auto's frontline counter staff and interviewed owner-operator.	Strictly rejected full ERP implementation and strict lab warranty claim protocols; instituted a hybrid cloud spreadsheet and verbal counter script.

D. Evidence and quantitative-claim verification

Use this table for important factual or quantitative claims, especially claims carried from Weekly Records 1–3 or used in recommendations.

Claim / figure	Evidence Folder source or Weekly Record	Independent verification performed	Result / correction made
Four Individual Proprietorships (IPs) bypassing corporate VAT registration threshold.	Weekly Record 1 (Field 1 & 2) & RK Tax Code.	Audited business tax declarations and verified Article 683 of the Tax Code of the Republic of Kazakhstan (simplified regime limits).	Confirmed validity of 4-IP structure as legal tax optimization, not an informal partnership.
1–3 calendar days border logistics variance for Russian OEM parts.	Weekly Record 2 (Field 2 & 3) & EAEU customs transit logs.	Verified recent freight transit receipts and interviewed logistics handlers	Retained figure as the primary operational driver forcing substitute

		at Koktal warehouse.	Chinese aftermarket parts sales.
5–7 years operational trust with 4–5 verified independent STO garages.	Weekly Record 2 (Field 2) & Physical store ledger notebooks.	Inspected physical paper debt notebooks behind the counter at retail branches.	Proved that informal trade credit operates without formal banking contracts or automated credit checks.

E. Authorship and judgment reflection

One AI suggestion or conclusion I did not accept, and why:
The AI initially recommended adopting Interkom's centralized digital warranty verification portal and strict laboratory defect inspection. I rejected this because imposing corporate bureaucracy would alienate local STO mechanics who depend on immediate counter parts replacement to prevent vehicle downtime.

One material change I made after checking evidence independently:
I replaced generic recommendations for an automated ERP system with a phased "Hybrid Record-Keeping" solution (digitizing physical ledger notebooks into cloud spreadsheets every 24–48 hours) because AB Auto's current four-IP administrative setup lacks the bandwidth for enterprise software.

Any remaining uncertainty or limitation I disclosed in the report:
The report acknowledges that the four-IP decentralized ownership structure, while fiscally optimal under current simplified tax limits, creates long-term constraints when negotiating large-scale, formal corporate B2B delivery contracts that mandate single corporate VAT invoicing.

F. Assignment-specific confirmations

[✓] Every quantitative claim in my report is traceable to evidence and verification.

[✓]My Company A / Company B transfer judgments (adopt, adapt, pilot, delay or reject) are my own reasoned judgments.

[✓]My final recommendations are specific to Company B and the Kazakhstan context rather than copied from AI output.

[✓]My reference list contains only sources I independently checked and can locate.

Final declaration

I declare that this form accurately records my AI use for this assignment. I independently verified the claims, numbers and sources for which I remain accountable, and I authored the final analysis and judgment submitted for assessment. Any AI support listed above was used only as disclosed in this form.

[✓] I confirm that every AI system I used is listed in this declaration.

[✓] I confirm that I did not fabricate, invent or knowingly submit unverifiable data, claims or references.

[✓] I confirm that I did not upload the OpenStax textbook or the course core text to an AI system.

Student signature: Manat Amir Date: 20.09.2026
