AI-USE DECLARATION

Assignment 3: Photo Essay

Customer, technology and data systems reshaping value

Student details

Student name	**Manat Amir**	**Student ID**	**261434 (DPA-2602)**
Group	**DPA-2602**	**Submission date**	**16.10.2026**
Company A	**Interkom-Auto (Interkom)**	**Company B**	**AB Auto (Astana SME — Koktal 15B & Abylai Khan 62, 4 IPs)**

AI-use level and student responsibility

- Preparation of this assignment operates at AI-use Level 2 (supported, disclosed).
- Permitted with disclosure: brainstorming, structural feedback, language support, counterargument generation where relevant, and preliminary analysis.
- You must independently verify every claim, number and source and author the final analysis yourself.
- The individual defence operates at Level 1: no AI assistance of any kind.
- Do not upload the OpenStax textbook or the course core text to an AI system.

A. Overall AI-use status

☑ I used one or more AI systems while preparing this assignment. I have documented each use below.

☐ I did not use any AI system for this assignment. I have completed the integrity confirmations and final declaration only.

If you select "no AI used," do not leave the declaration blank: tick the second box and sign the final declaration.

B. AI systems register

List every AI system used. Add rows if needed.

AI system / model	Provider / version (if known)	Date(s) used	Purpose in this assignment
Antigravity (Google Gemini LLM)	Google DeepMind (Agentic Coding & Academic Assistant, Level 2)	14–16 October 2026	Level 2 structural drafting and conciseness editing (strictly 400–500 word commentary constraint), Excel formula cleaning verification for the Week 7 Messy Data Drill, and Python/Matplotlib layout formatting of student-verified operational diagrams.
Microsoft Excel / Python (openpyxl & matplotlib)	Microsoft Office 365 / Python 3.14 local runtime	16 October 2026	Deterministic execution of data-cleaning formulas (Remove Duplicates, TRIM, PROPER, AVERAGEIF, COUNTIF) on BA2026_Week7_Alma_Orders_Data.xlsx and rendering high-resolution visual charts from student-supplied AB Auto numbers.
None (OpenStax & Course Core Texts Strictly	N/A — Zero textbook ingestion	N/A	Explicit compliance confirmation: Neither OpenStax Introduction to Business (2nd ed.) nor Yeshenkulova

AI system / model	Provider / version (if known)	Date(s) used	Purpose in this assignment
Excluded)			et al. (2026) course texts/slides were ever uploaded, pasted, or ingested into any AI system.
—	—	—	—

C. Detailed AI activity and verification log

Record each materially different use. The declaration should show not only what the system did, but how you checked it and what you changed, rejected or corrected.

Part of assignment / activity	AI system	What I used AI to do	How I verified the output independently	What I changed, rejected or corrected
1. Week 7 Messy Data Drill (BA2026_Week7_Alma_Orders_Data.xlsx)	Antigravity / Gemini LLM	Checked Excel formula syntax (TRIM, PROPER, AVERAGEIF, COUNTIF) and structured the Change Log and KPI sheets.	Manually audited all 40 raw order rows; independently verified deduplication of A1007 (R40) and A1020 (R41) to 38 unique orders, App share (25/38 = 65.79%), and prep-time average (8.75 min across n=36 valid rows).	Rejected automated imputation for missing prep time A1006 (left blank); excluded the corrupted 240-min timer outlier (A1015) that falsely inflated the mean to 15.00 min; flagged negative delivered order A1028 (Qty = -1) for human POS check.
2. Customer Journey & Fleet Downtime Economics (Visuals 1–4)	Antigravity / Gemini LLM	Formatted analytical diagrams and refined academic English commentary on customer segments and counter touchpoints.	Independently verified the 65-minute baseline lead time and 35-minute cross-hub lookup bottleneck against the physical September 2026 in-store counter order logbook at Koktal 15B (n = 45 morning peak B2B GAZelle repair orders).	Replaced generic retail touchpoints with AB Auto's actual dual-hub structure (Koktal 15B warehouse & Abylai Khan 62 branch across 4 IPs) and real commercial GAZelle downtime losses (25,000+ KZT/day).
3. Week 6 Human-Only vs. AI-Supported Marketing Comparison (Visuals 5–6)	Antigravity / Gemini LLM	Structured the 5 Ps comparison matrix and Kaspi Shop catalog card layout comparing manual vs. AI-assisted SKU drafting.	Verified real GAZelle clutch/suspension pricing (Russian OEM KraftTech at 48,500 KZT vs. Chinese LYNX at 34,900 KZT), Kaspi acquiring fees, and simplified-tax limits across the 4 IPs.	Overruled AI suggestion of automated dynamic discounting on Kaspi Shop; enforced the Owner's strict >=18% gross margin floor across all 4 IPs and mandatory verbal counter disclosure of aftermarket warranty limits.
4. Week 7 5-Stage AI/Data Workflow & Governance Risk Register (Visuals 7–9)	Antigravity / Gemini LLM	Drafted layout for the 5-stage workflow, Koktal 15B QR bin-zone map, and 7-row governance risk register.	Audited physical bin shelving at Koktal 15B (Zones A–D) and walked through the Monday 09:00 peak outage stress test with counter staff and the Senior Storekeeper.	Inserted a mandatory <2-minute tactile Human Verification gate (Senior Storekeeper auditing metal casting stamps and gasket seals) and specified the exact 3-tier escalation path (2m Storekeeper -> 5m Store Manager -> 15m Owner) and 12-hour offline paper fallback.
5. Comparative Analysis & Transfer	Antigravity /	Checked commentary word count (strictly 400–500 words)	Compared Interkom-Auto's centralized B2B portal (interkom.kz)	Authored final transfer verdicts: Rejected Interkom's

Part of assignment / activity	AI system	What I used AI to do	How I verified the output independently	What I changed, rejected or corrected
Verdicts (Visual 10)	Gemini LLM	and IEEE reference numbering across all 10 visuals.	against AB Auto's physical STO debt notebooks (4–5 partner garages with 5–7 years of relationship tenure).	algorithmic credit scoring and robotic conveyor sorting; Adapted mobile QR bin routing and OCR invoice intake with human verification.

D. Commentary, governance and transfer verification

Use this table for AI-supported claims, governance risks/controls, marketing interpretations and Company A → Company B transfer judgments.

Claim / risk / transfer judgment	Evidence or source used	How I verified it	Change made after checking
65-minute baseline Order-to-Dispatch Lead Time (and 35-min cross-hub stock lookup bottleneck) at Koktal 15B	AB Auto Koktal 15B In-Store Counter Order Logbook & WhatsApp inquiry timestamps (September 2026 audit, n = 45 B2B orders) [4]	Calculated elapsed minutes from WhatsApp/walk-in inquiry receipt to counter handover across 45 morning peak GAZelle orders in the September 2026 Koktal logbook.	Explicitly sourced the 65-min baseline to the September 2026 Koktal in-store order logbook across Visuals 1, 3, 7, 8 and Week 7 Artifacts (directly resolving A2 instructor feedback #1).
Explicit 3-Tier Escalation Path (2m / 5m / 15m) & Monday 09:00 12-Hour Offline Fallback	Weekly Record 7 Risk Register, AB Auto counter SOPs at Koktal 15B & Abylai Khan 62, and CERT/CC security guidance [1], [4], [10]	Verified staff authority lines and timed the offline switch to laminated QR bin maps, pre-printed 4-IP order tickets, and physical STO debt notebooks during the 60-second stress test.	Added exact quantitative triggers (AI OCR confidence <85%, supplier price variance >±10%, outage >3 min) and named roles culminating in <=15-min Owner resolution (resolving A2 feedback #2).
5 Ps Marketing Comparison: >=18% Gross Margin Floor across 4 IPs & KraftTech vs. LYNX Pricing	Weekly Record 6 Artifact, AB Auto 1C price lists, Kaspi Merchant Partner rules, and RK Tax Code Art. 683 [4], [5], [8], [9]	Verified landed EAEU vendor invoice costs (Satis Auto, Planeta Auto), Kaspi QR/Shop commission differentials, and semi-annual simplified-tax turnover ceilings across the 4 IPs.	Blocked automated promotional price cuts that would breach the 18% gross margin floor or push a single IP over the statutory simplified tax ceiling.
Transfer Verdict: REJECT Interkom algorithmic credit scoring; ADAPT QR bin routing & OCR intake	Interkom-Auto B2B portal (interkom.kz) [6] vs. AB Auto physical STO debt ledger notebooks [4]	Inspected physical debt notebooks behind the Koktal 15B counter for the 4–5 partner STO garages (5–7 years tenure) and assessed floor space for heavy GAZelle leaf springs.	Rejected Interkom's automated banking credit checks (which would alienate core STO mechanics) and robotic conveyors; adapted mobile QR bin tags and human-verified OCR catalog drafting.

E. AI-generated or AI-edited visual disclosure log

Complete one row for every visual that was generated or materially edited with AI. AI-generated visuals must also be labelled on the visual itself.

Visual no. / description	AI system	Generated / edited / other use	Labelled on visual? Yes / No	Source / attribution or verification notes

Visual no. / description	AI system	Generated / edited / other use	Labelled on visual? Yes / No	Source / attribution or verification notes
Visuals 1 & 2: Dual-Hub 4-IP Architecture & Customer Segmentation Journey	Antigravity / Python (matplotlib)	Programmatic diagram layout formatting from student-authored AB Auto operational data (not synthetic AI imagery)	Yes (labelled on visual header & IEEE source line)	Data verified against AB Auto 4-IP registration records (RK Tax Code Art. 683), Koktal 15B / Abylai Khan 62 store directory, and STO ledger records [4], [5], [8].
Visuals 3 & 4: Sept 2026 Koktal Logbook Baseline KPI & Counter Touchpoints	Antigravity / Python (matplotlib)	Programmatic chart & matrix rendering from student's empirical field measurements	Yes (labelled on visual header & IEEE source line)	65-min baseline (35-min lookup bottleneck) verified against Sept 2026 Koktal 15B in-store order logbook (n=45); KraftTech vs. LYNX prices verified against counter price lists [4], [7].
Visuals 5 & 6: Week 6 5 Ps Marketing Comparison & Kaspi Catalog Results	Antigravity / Python (matplotlib)	Programmatic table & log-scale chart rendering from Week 6 trial data	Yes (labelled on visual header & IEEE source line)	Verified against Week 6 20-SKU Kaspi cataloging experiment (42m manual vs. 4.5m Human+AI; >=18% gross margin floor enforced by Owner) [1], [4], [9].
Visuals 7 & 8: 5-Stage AI/Data Workflow & Koktal 15B QR Bin Waterfall	Antigravity / Python (matplotlib)	Programmatic workflow & warehouse schematic formatting from Week 7 artifact	Yes (labelled on visual header & IEEE source line)	Verified Stage 3 Senior Storekeeper <2-min tactile inspection gate and Koktal Zones A–D bin layout reducing lead time from 65.0m to 11.5m [1], [3], [4].
Visuals 9 & 10: 7-Row Risk Register (15m Escalation / 12h Fallback) & Transfer Verdicts	Antigravity / Python (matplotlib)	Programmatic risk table & roadmap rendering from student's governance register	Yes (labelled on visual header & IEEE source line)	Verified 3-tier escalation triggers (2m/5m/15m), 12h paper-to-1C fallback, CERT/CC security controls, and Interkom-Auto transfer verdicts [1], [4], [6], [10].

F. Visual-source integrity check

☑ Every visual has a source line.

☑ Every third-party visual is openly licensed or used with permission and is attributed in IEEE style.

☑ Every AI-generated visual is visibly labelled as AI-generated on the visual itself.

☑ The commentary explains what each visual means for Company B rather than merely captioning what it shows.

G. Authorship and judgment reflection

One AI-generated interpretation, risk or visual idea I rejected or changed, and why:

Answer: I rejected the AI's initial suggestion to recommend adopting Interkom-Auto's automated bank-integrated credit scoring and consolidating AB Auto's four Individual Proprietorships (IPs) into a single corporate LLP (TOO) with dynamic Kaspi price discounting. In Astana's commercial GAZelle parts market, AB Auto's core competitive moat is 5–7 years of informal, post-repair trade credit recorded in physical counter notebooks for 4–5 partner STO garages; replacing human credit judgment with rigid banking algorithms would immediately alienate our highest-LTV B2B mechanics. Furthermore, consolidating the 4 IPs would breach the Article 683 simplified tax turnover threshold and trigger heavy corporate VAT overhead, while unchecked dynamic discounting would violate the Owner's strict 18% minimum gross margin floor.

One verification step that changed my governance analysis or transfer verdict:

Answer: Auditing the physical September 2026 in-store counter order logbook at the Koktal 15B warehouse (n = 45 morning peak B2B orders) and conducting the Monday 09:00 'pull-the-plug' stress test fundamentally reshaped my governance design. The logbook proved that 35 of the 65 baseline minutes were lost to unsynchronized stock lookups across the 4 IPs, while smudged Cyrillic EAEU manifests and oil-stained GAZelle parts frequently caused OCR misreads (<85% confidence). This led me to insert a non-delegable <2-minute tactile inspection by the Senior Storekeeper (Stage 3), define an explicit 3-tier escalation path (2 min Senior Storekeeper -> 5 min Store Manager -> 15 min General Manager/Owner), and mandate a 12-hour offline paper-to-1C fallback.

One limitation in the available visual or data evidence that I disclosed:

Answer: I explicitly disclosed that while the 65-minute baseline lead time is empirically measured from n = 45 morning peak B2B orders in the September 2026 Koktal 15B in-store counter logbook, the projected future-state lead time of 11.5 minutes (<15-minute target) is derived from a pilot time-motion trial on 20 GAZelle SKUs rather than a full 12-month longitudinal deployment. Additionally, operating across 4 decentralized IPs requires bi-daily manual/hybrid reconciliation of STO debt notebooks and careful monitoring of State Revenue Committee (KGD) tax-splitting rules.

H. Assignment-specific confirmations

☑ The visual sequence and the order of visuals are my own curatorial choices.

☑ At least two governance risks and their controls are supported by my Week 7 evidence.

☑ My adopt / adapt / pilot / delay / reject verdict is my own evidence-based judgment.

☑ Every factual claim in the commentary is traceable to a checked source.

Final declaration

I declare that this form accurately records my AI use for this assignment. I independently verified the claims, numbers and sources for which I remain accountable, and I authored the final analysis and judgment submitted for assessment. Any AI support listed above was used only as disclosed in this form.

☑ I confirm that every AI system I used is listed in this declaration.

☑ I confirm that I did not fabricate, invent or knowingly submit unverifiable data, claims or references.

☑ I confirm that I did not upload the OpenStax textbook or the course core text to an AI system.
