AI-USE DECLARATION

Assignment 4: Argumentative Essay

The value of business graduates in an AI-enabled economy

Student details

Student name	**Manat Amir**	**Student ID**	**261434**
Group	**DPA-2602**	**Submission date**	**31.10.2026**
Company A	Interkom-Auto (TOO, General Tax Regime 12% VAT, >1.3B KZT Taxpayer)	**Company B**	AB Auto (Astana — 4 IPs, Special Tax Regime 3%, Koktal 15B Hub)

AI-use level and student responsibility

- Preparation of this assignment operates at AI-use Level 2 (supported, disclosed).
- Permitted with disclosure: brainstorming, structural feedback, language support, counterargument generation where relevant, and preliminary analysis.
- You must independently verify every claim, number and source and author the final analysis yourself.
- This assignment has no separate individual defence; any live authentication activity must be completed without AI assistance.
- Do not upload the OpenStax textbook or the course core text to an AI system.

A. Overall AI-use status

☑ **[X] I used one or more AI systems while preparing this assignment. I have documented each use below.**

☐ I did not use any AI system for this assignment. I have completed the integrity confirmations and final declaration only.

If you select "no AI used," do not leave the declaration blank: tick the second box and sign the final declaration.

B. AI systems register

List every AI system used. Add rows if needed.

AI system / model	Provider / version (if known)	Date(s) used	Purpose in this assignment
Antigravity (Agentic Assistant)	Google DeepMind (Level 2)	29–31.10.2026	Brainstorming 5-part argumentative structure, verifying section word-count limits (850–950 words), and automating DOCX/PDF package compilation.
Claude 3.5 Sonnet	Anthropic	30–31.10.2026	Drafting and stress-testing steelman counterargument options on autonomous multimodal AI ERP agents displacing junior financial analysts.
ChatGPT (GPT-4o)	OpenAI	28–31.10.2026	Generating raw textbook financial ratio interpretations for AB Auto's Week 8 Discrepancy Audit (testing Acid-Test 0.44x diagnosis) and academic phrasing polish.
Microsoft Excel / Python 3.13	Microsoft / Python PSF	28–31.10.2026	Deterministic verification of AB Auto 2026 ratios (Current 2.33x, Acid-Test 0.44x, Net Margin 7.0%, D/E 0.79x); zero OpenStax or course core texts uploaded.

C. Detailed AI activity and verification log

Record each materially different use. The declaration should show not only what the system did, but how you checked it and what you changed, rejected or corrected.

Part of assignment / activity	AI system	What I used AI to do	How I verified the output independently	What I changed, rejected or corrected
1. Position & 5-Part Essay Structure	Antigravity	Brainstormed structural outline across Position, 3 Grounds, Counterargument, and Conclusion.	Checked every section requirement and word limit against the official BA2026 Assignment 4 Brief.	Replaced generic global graduate claims with an explicit qualified position anchored in AB Auto vs. Interkom-Auto in Kazakhstan.
2. Week 8 Financial Ratio Discrepancy Audit	GPT-4o	Requested raw financial health diagnosis from AB Auto's 4 ratios (2.33x, 0.44x, 7.0%, 0.79x).	Recomputed ratios in Excel (8.0M / 18.0M = 0.44x) and audited daily cash inflows in ABPos Kaspi QR logs (>3.0M KZT/day).	Rejected GPT-4o's diagnosis of imminent bankruptcy/default on Acid-Test 0.44x; corrected 7.0% net margin context to reflect the 3% Simplified Tax Regime (Art. 683).
3. Week 9 Capability & Workforce Mapping	Antigravity	Mapped Human, Business, Digital, and Meta-capabilities to Week 4 operational tasks.	Verified operational bottlenecks against Koktal 15B & Abylai Khan 62 logs (35-min phone lookup eliminated by ABPos).	Grounded abstract HR labels in AB Auto duties: STO informal debt-ledger negotiation, >=18% gross margin floor control, and <2 min tactile part checks.
4. Company A vs. Company B Comparative Transfer	Antigravity / GPT-4o	Tested comparative phrasing contrasting decentralized SMEs with Tier-1 corporate distributors.	Verified RK Tax Code Art. 683 limits (Law No. 120-VI) and Interkom-Auto TOO General Tax Regime disclosures (12% VAT, >1.3B KZT taxpayer).	Rejected AI suggestion that AB Auto adopt Interkom-Auto's automated ERP credit scoring, which would sever unrecorded B2B STO mechanic trust contracts.
5. Counterargument & Refutation Stress Test	Claude 3.5 Sonnet	Generated strongest opposing case on multimodal AI ERP suites replacing entry-level junior analysts.	Cross-checked task-displacement theory against Acemoglu & Restrepo [8], Brynjolfsson & McAfee [7], and RK fiduciary tax rules [3].	Retained steelman opposing case at full strength; authored refutation grounded in contextual blindness (0.44x false insolvency) and non-delegable legal liability.

D. Financial and argumentative verification

Use this table for AI-supported interpretation of financial ratios, organizational/career evidence, Company A / Company B comparison, or counterargument development.

Claim / figure / argument	Original evidence or source	Independent check performed	What I changed / retained and why
Acid-Test 0.44x reflects strategic inventory + cash velocity, not insolvency	AB Auto Q3–Q4 management accounts & ABPos Kaspi QR logs [5]	Verified (42.0M - 34.0M) / 18.0M = 0.44x; audited daily Kaspi QR inflows (>3.0M KZT/day) vs. 30–45 day EAEU vendor terms.	Retained 0.44x ratio; rejected AI default warning and featured this discrepancy as primary Ground 1 evidence.
Net Profit Margin 7.0% (26.88M / 384.0M KZT) under 3% Simplified Tax	AB Auto 2026 accounts [5] & RK Tax Code Art. 683 [3]	Verified 26.88 / 384.0 = 7.00%, 4-IP turnover allocation under Art. 683, and owner's >=18% gross margin floor.	Corrected AI's erroneous 20% CIT / 12% VAT assumption; retained 7.0% as resilient SME net profitability.
ABPos digitalization shifts graduate value from clerical lookup to governance	Week 4 Operating Model, Week 9 Capability Portfolio & ABPos logs [5]	Confirmed elimination of 35-min cross-hub phone calls between Koktal 15B and Abylai Khan 62.	Retained linkage showing graduate value migrates to STO relational credit chains and margin-floor enforcement.

Claim / figure / argument	Original evidence or source	Independent check performed	What I changed / retained and why
Corporate AI cannot price informal Kazakhstan B2B trade credit	RK Tax Code Art. 683 [3], BNS Astana SME data [4], Interkom-Auto report [6]	Compared AB Auto (4 IPs, 3% tax, informal STO ledgers) vs. Interkom-Auto (TOO, 12% VAT, >1.3B KZT taxpayer).	Retained Ground 3 institutional transfer argument specific to Kazakhstan's emerging SME market.
Autonomous multimodal AI ERP compresses junior analyst tasks	Brynjolfsson & McAfee [7]; Acemoglu & Restrepo [8]	Verified task-automation mechanisms in economic literature and tested against RK statutory tax/banking liability rules.	Stated opposing case at full strength; refuted via algorithmic contextual blindness and lack of legal personhood.

E. Counterargument integrity check

If AI helped generate or test a counterargument, state how you ensured the opposing case was fair rather than a straw argument:

Answer: Rather than setting up a weak strawman (such as claiming AI makes basic arithmetic errors), I prompted Claude 3.5 Sonnet to argue from the perspective of an enterprise ERP automation economist citing Acemoglu & Restrepo [8] and Brynjolfsson & McAfee [7]. I stated the strongest structural critique directly in Section 5: multimodal AI ERP agents now automate primary invoice auditing, statement interpretation, and variance reporting—the exact tasks that historically justified entry-level junior analyst headcount and wages.

What evidence ultimately determined your answer to the counterargument:

Answer: Two empirical findings from AB Auto determined my refutation: (1) Contextual blindness proven in Week 8, where AI misdiagnosed AB Auto's 0.44x Acid-Test ratio as imminent insolvency because it could not observe >3.0M KZT/day Kaspi QR cash velocity or 34.0M KZT strategic GAZelle buffer stock (an autonomous freeze would sever 45% of B2B STO revenue) [5]; and (2) Statutory non-delegability, as AI lacks legal personhood to bear fiduciary liability before Kazakhstan's State Revenue Committee (Art. 683) or commercial banks [1], [3].

F. Week 8 quantitative evidence verification

Ratio / financial figure used	My own calculation / source	AI-supported interpretation (if any)	Discrepancy found and how resolved
Acid-Test (Quick) Ratio: 0.44x	Quick Assets 8.0M KZT (42.0M Current Assets - 34.0M Inventory) / Current Liabilities 18.0M KZT = 0.44x [5].	GPT-4o flagged 0.44x (<1.0x benchmark) as acute liquidity distress, imminent technical default, and high bankruptcy risk.	REJECTED AI bankruptcy diagnosis: verified >3.0M KZT/day peak Kaspi QR cash turnover in ABPos settling 30–45 day vendor payables without cash gaps.
Current Ratio: 2.33x	Current Assets 42.0M KZT / Current Liabilities 18.0M KZT = 2.33x [5].	GPT-4o diagnosed comfortable excess liquidity and idle working capital above the 2.0x textbook threshold.	CORRECTED interpretation: 80.95% (34.0M KZT) is physical GAZelle parts staged at Koktal 15B to hedge 1–3 day EAEU border transit delays, not idle cash.
Net Profit Margin: 7.00%	Annual Net Profit 26.88M KZT / Annual Sales 384.0M KZT = 7.00% [5].	GPT-4o judged 7.0% thin and vulnerable assuming standard 20% Corporate Income Tax and 12% VAT.	CORRECTED fiscal baseline: AB Auto operates across 4 IPs under Art. 683 (3% Simplified Tax, 0% VAT) with an owner-enforced >=18% gross margin floor.
Debt-to-Equity Ratio: 0.79x	Total Liabilities 22.0M KZT / Owner's Equity 28.0M KZT = 0.79x [5].	GPT-4o assessed 0.79x (<1.0x) as moderate, conservative leverage driven by trade payables.	ACCEPTED arithmetic and core solvency view; added verification that family consumer vehicle loans are segregated outside the 4 operational IPs.

G. Authorship and judgment reflection

One AI suggestion or line of reasoning I rejected or materially revised, and why:

Answer: I explicitly rejected GPT-4o's financial recommendation that AB Auto liquidate GAZelle parts inventory through aggressive Kaspi price discounting and impose automated bank-style credit scoring on repair shops to raise its Acid-Test ratio from 0.44x to

1.0x. Unchecked discounting violates the owner's >=18% gross margin floor, inventory liquidation exposes fleets to EAEU border delays, and algorithmic credit gates would destroy 5–7 year relational STO mechanic debt ledgers [5].

One point where verification changed my position or qualified my conclusion:

Answer: Testing the entry-level displacement counterargument against Acemoglu & Restrepo's task framework [8] forced me to qualify an unconditional 'yes.' Verification showed that AI genuinely compresses the market value of passive graduates who merely compute textbook ratios; graduates become more valuable ONLY when they combine digital tool governance (ABPos) with contextual auditing and fiscal judgment.

The condition under which I would change my mind, and how I reached it:

Answer: "The condition under which I would change my mind is if AI systems are granted autonomous legal liability and demonstrate empirical capability to audit informal, unrecorded relational credit dynamics in emerging markets without human verification." I reached this falsifiable boundary by isolating the two exact structural ceilings—fiduciary non-personhood under RK law and invisibility of informal B2B trust contracts—that currently make human analysts indispensable at AB Auto.

H. Assignment-specific confirmations

☑ [X] At least one financial figure or ratio in the essay comes from my Week 8 work and has been independently verified.

☑ [X] The strongest counterargument is stated fairly and the final answer is my own judgment.

☑ [X] My argument is grounded in Company B, Company A comparison and the Kazakhstan context rather than general AI opinion.

☑ [X] My final essay is authored by me and every cited source is in my Evidence Folder.

Final declaration

I declare that this form accurately records my AI use for this assignment. I independently verified the claims, numbers and sources for which I remain accountable, and I authored the final analysis and judgment submitted for assessment. Any AI support listed above was used only as disclosed in this form.

☑ [X] I confirm that every AI system I used is listed in this declaration.

☑ [X] I confirm that I did not fabricate, invent or knowingly submit unverifiable data, claims or references.

☑ [X] I confirm that I did not upload the OpenStax textbook or the course core text to an AI system.
